Introduction

TAREEQI is a mobile app that helps Parents
,with children using the school bus, track
their children & know the bus current

location and arrival time. And also allows the school admin to track the whole buses fleet, on one screen. And all of that only by using the drivers' smartphones.

USERS

- **Parents.**
- **Drivers.**
- **School Admins.**

Functions

1)Parent functions:

- a) Signup: where the parent can create a new account and choose the school of his children.
- b) Sign in: where the user can get access to his account.
- c) Enter activation code: where the user enters the activation code of his bus line , in order to track it.
- d) Edit profile: where the user can edit his information.
- e) Tracking: where the user can track his bus & know its arrival time.
- f) Call: where the user presses on in order to call the driver .

2)Driver Functions:

- a) Signup : enter his phone number in order to see his route on the map.

- b) sign in.
- c) Edit profile: where the user can edit his personal information.
- d) Start trip: where the driver starts the trip in order to allow the parents to track the bus.
- e) check in : where the user announces that a certain student has entered the bus.
- f) arrive at station: where the driver announces that he has arrived to a certain station.
- g) check out : where the user announces that a student has left the bus.
- h) End Trip : where the driver announces that he has finished the trip successfully.

3)Admin functions:

- a) sign up
- b) Sign in
- c) Create route: where he creates a bus route (ex maadi route).
- d) Add driver: where he adds a new driver to the system.

- e) Add Bus : where he adds a new vehicle to the system.
- f) Create Trip: where he creates a certain trip (with a certain time) on a Certain route , and assigns a driver and a bus to this trip.
- g) Add passenger : where he adds the students who are supposed to ride & track this bus.
- h) Create Verification code: where he create the verification codes that allows the parents to track the buses of their children.

Non-Function Requirements

- **Usability:**

where the app needs to be user friendly in order to encourage the users to use it on the daily basis.

- **Performance:**

The app needs to perform well, since the app requires accuracy in both the bus location & the arrival time.

- **Reliability:**

Since the app must be reliable in order to make the parents trust using it.

- **Maintainability :**

The app need to be maintainable since people depend on it on the daily basis , so any error will affect these people.

- **Security:**

The app needs to be highly secured since it has the data of schools and its students which is very valuable information.

Users Scenarios

- Parents:

- Scenario 1:

Mahmoud creates an account , chooses the school of his children , entering the verification code of their buses and then tracks their bus.

- Scenario 2:

Ali receives a notification , opens the App , Tracks the bus and Sees the estimated arrival time .

- Scenario 3:

Ahmed opens the App , Tracks the bus , And then presses on the call button and calls the driver on his phone.

- Driver:

- Scenario 1:

Sayed creates an account , sees his assigned trips and its time & closes the app.

- Scenario 2:

Wael opens the app starts the Trip , arrives at stations , checks in the students and ends the trip after arriving to the school.

- Scenario 3:

Mina opens the app & Starts the trip , Presses on the navigation button to see his route , Arrives in stations , checks out the students and Ends the trip after finishing his route.

- **Admin:**

- Scenario 1:

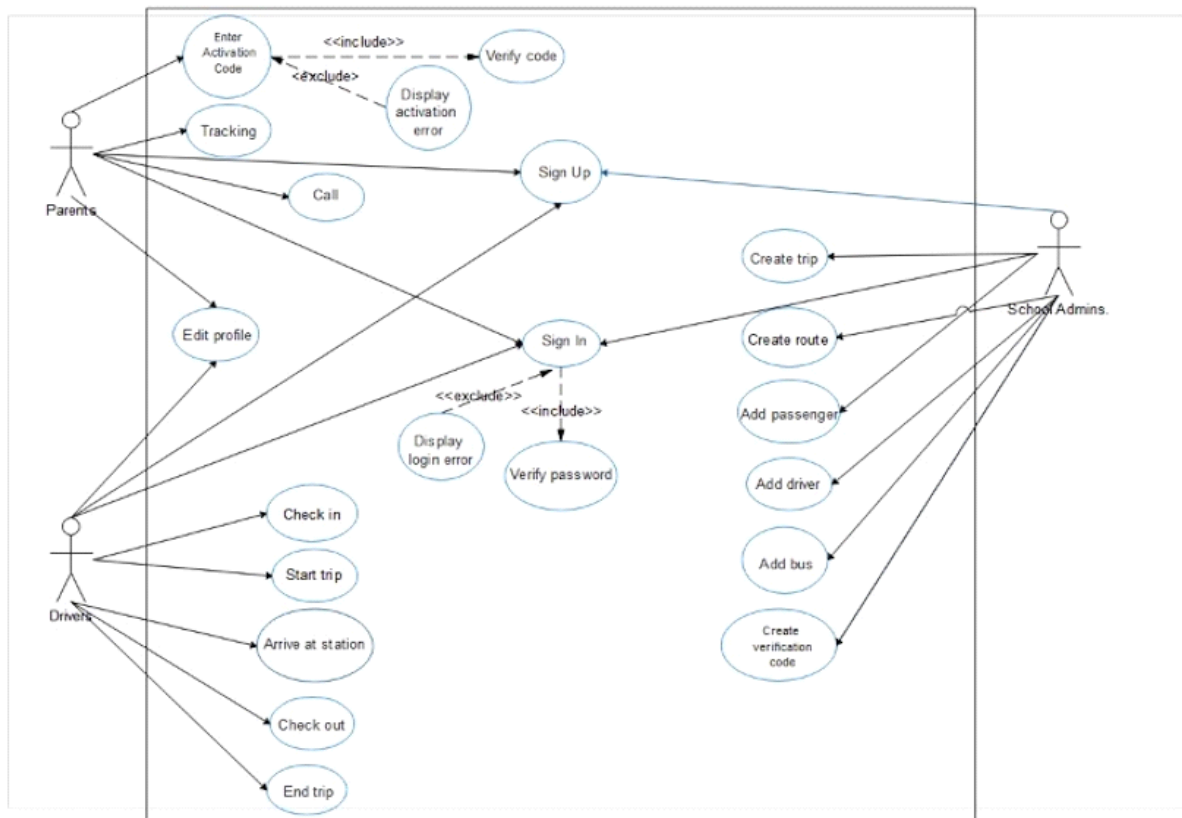

Mahmoud Opens the Admin panel , creates an account , creates a Trip , adds a bus , adds a driver.

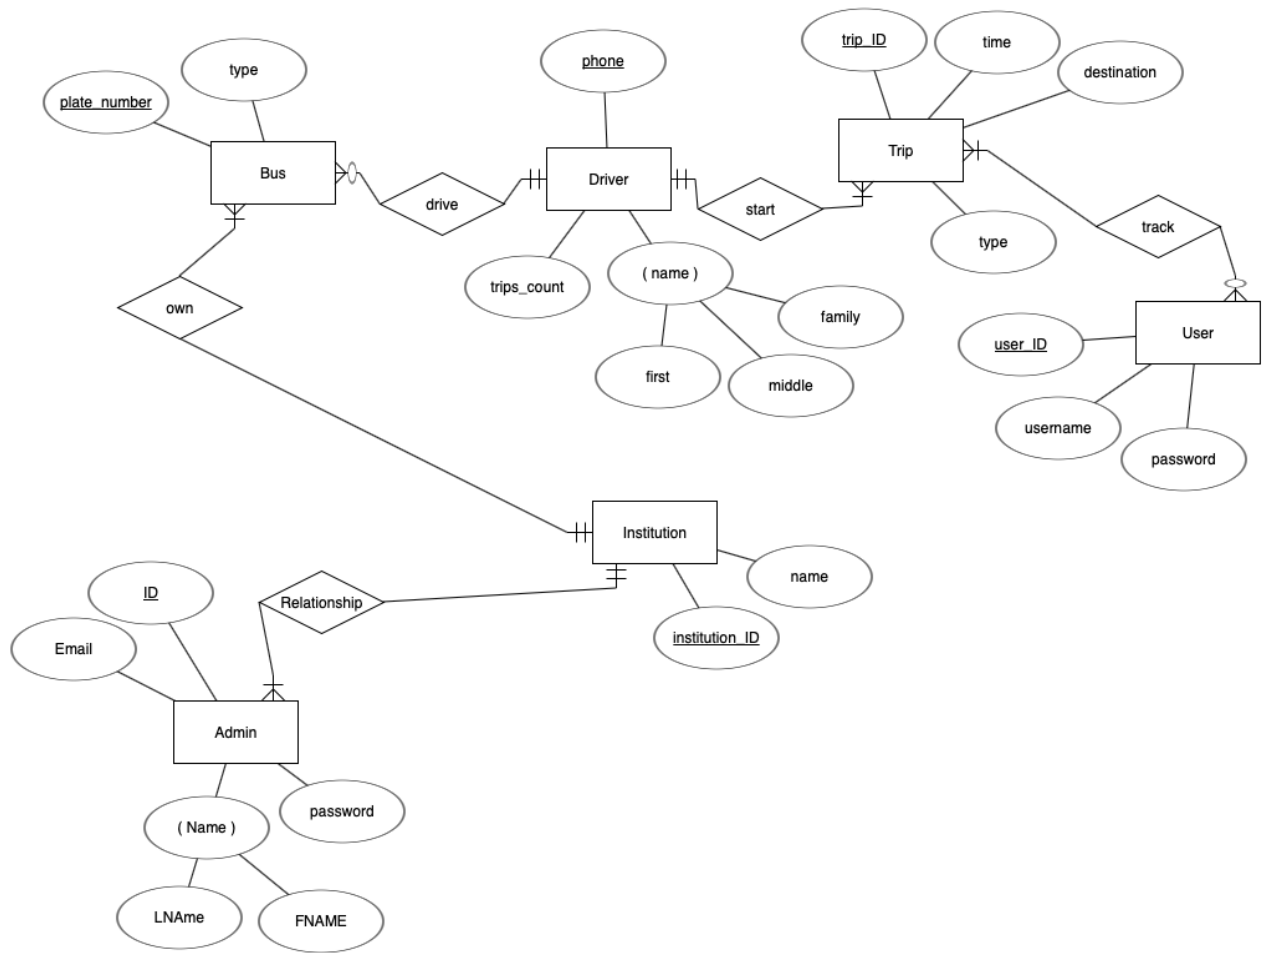

- Scenario 2:

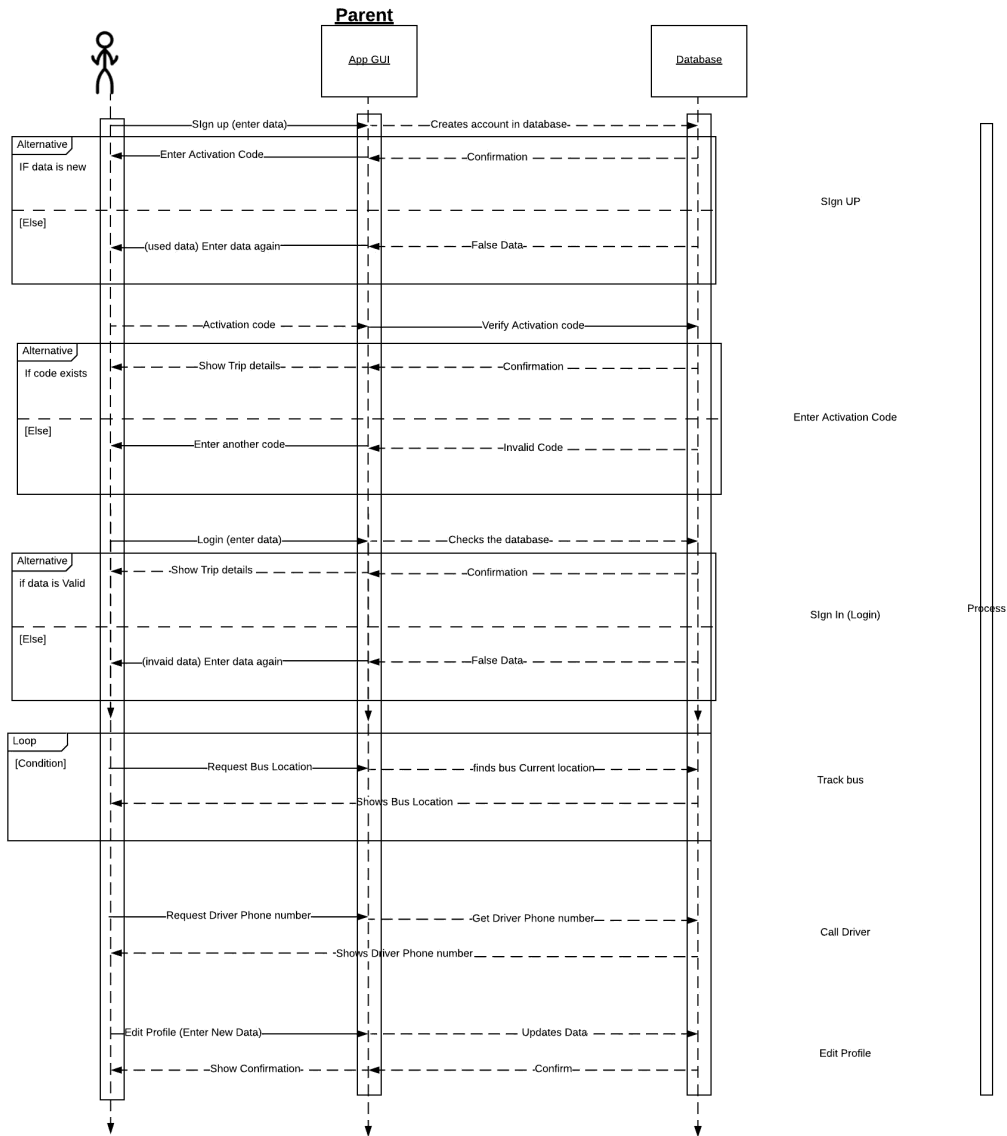

Marwan Opens the Admin panel , Creates a trip on a route and assigns a driver and a bus to this trip.

- Scenario 3:

Hany Opens the Admin Panel and Tracks the active buses.
